FDC · since 1936

Supplier Due-Diligence

Analyst-grade web & news research on all 27 suppliers — capacity, money, risk and quality — and how it is now built into the Procurement Intelligence Cockpit.

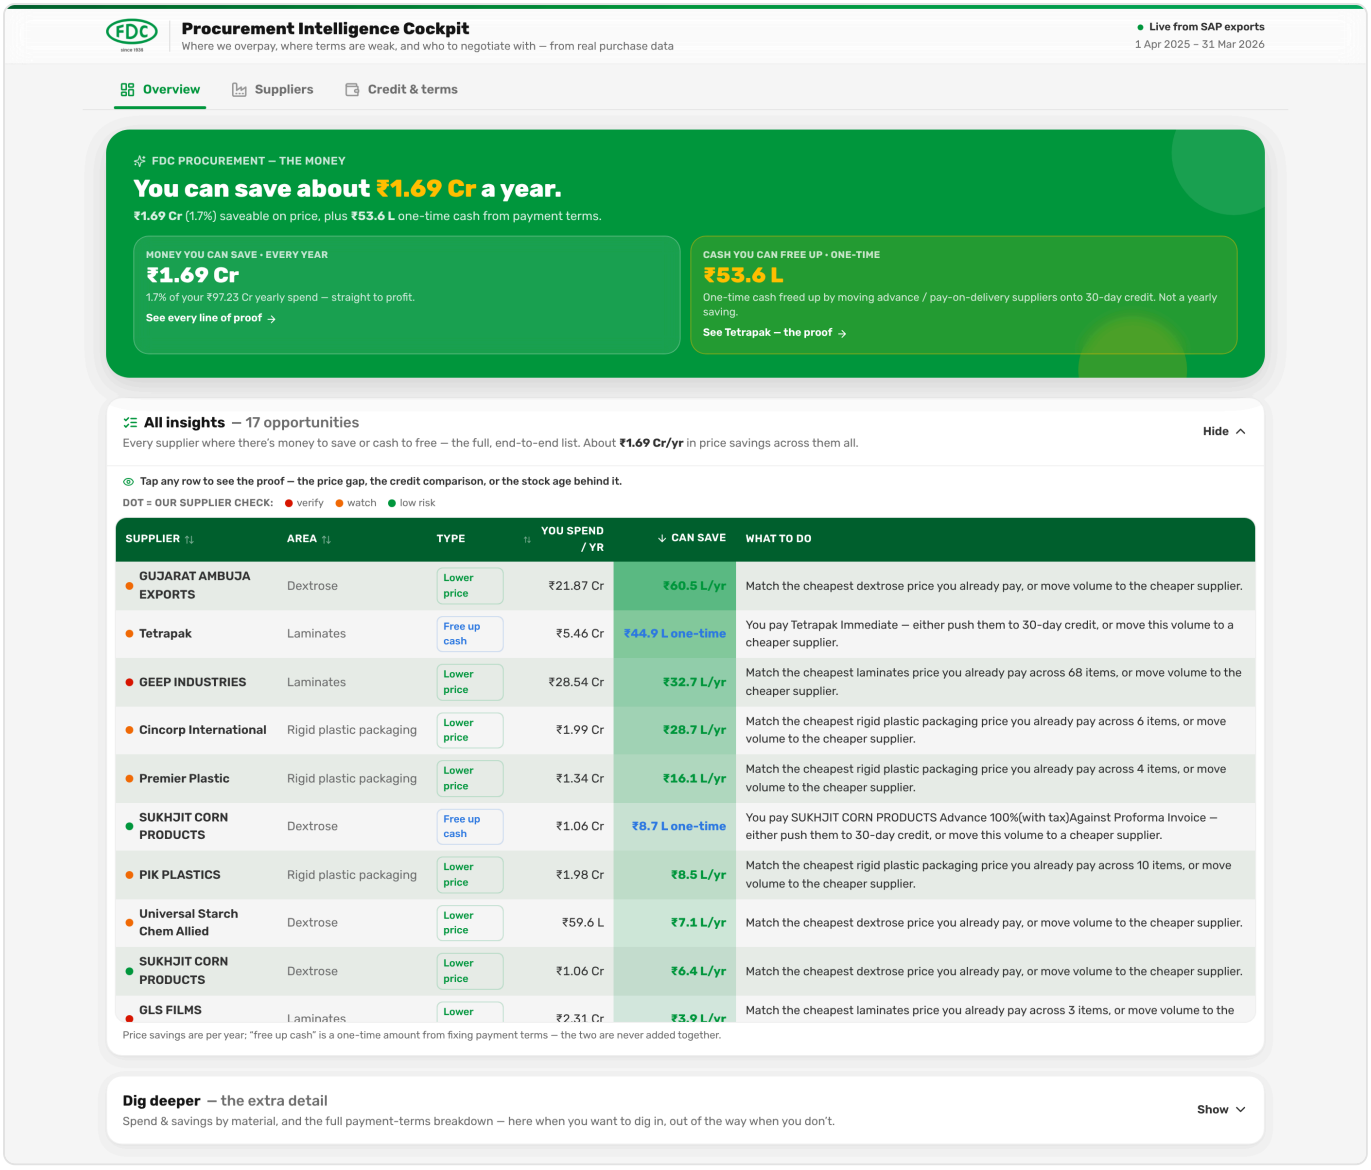

Prepared October 2026 · Data window 1 Apr 2025 – 31 Mar 2026 · Confidential — for FDC internal use

> Every supplier was checked across ~50 angles. The serious findings — Kilitch's FDA data-fabrication, GEEP's cartel conviction, UFlex's chairman conviction, GLS's near-insolvency & fatal fire — were verified against primary sources (FDA, CCI, courts). The "ghost" alternatives were resolved against FDC's own SAP purchase registers. Every claim is a lead to verify before acting, not a final legal conclusion.

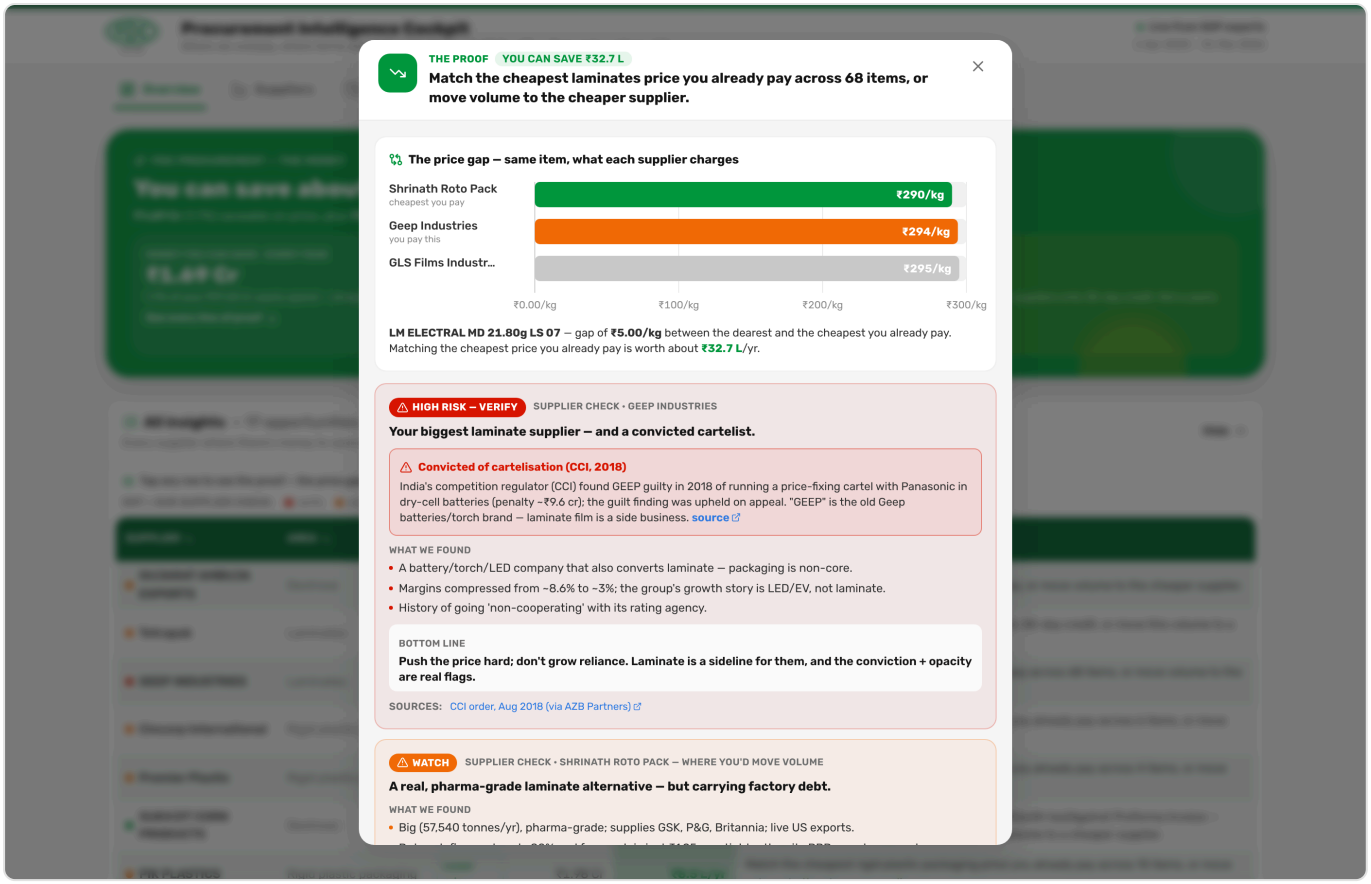

- **High risk** — a serious, documented flag
- **Watch** — a concern to weigh
- **Low risk** — financially strong

What we built — the dashboard

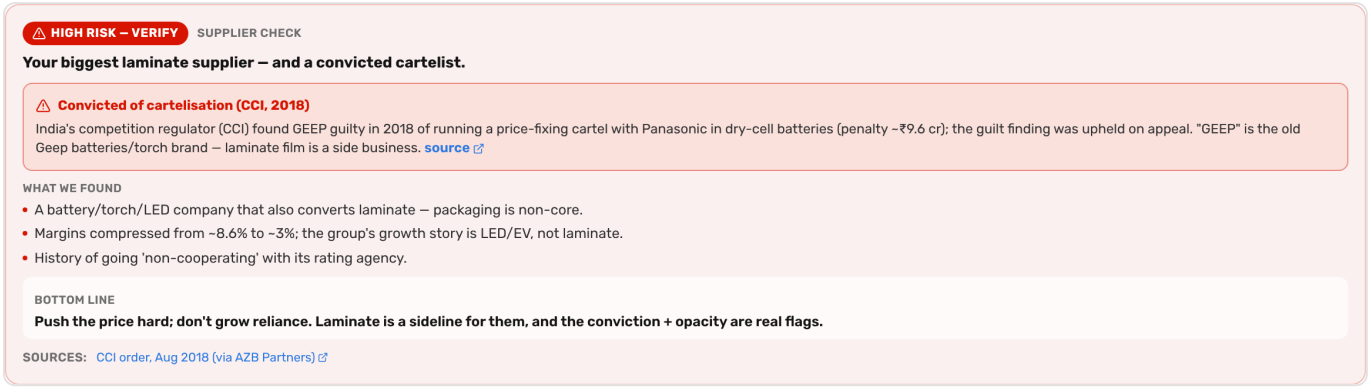

The research below isn't a separate document you have to cross-reference — it's wired into the cockpit, in plain English, right where the money decisions are made.

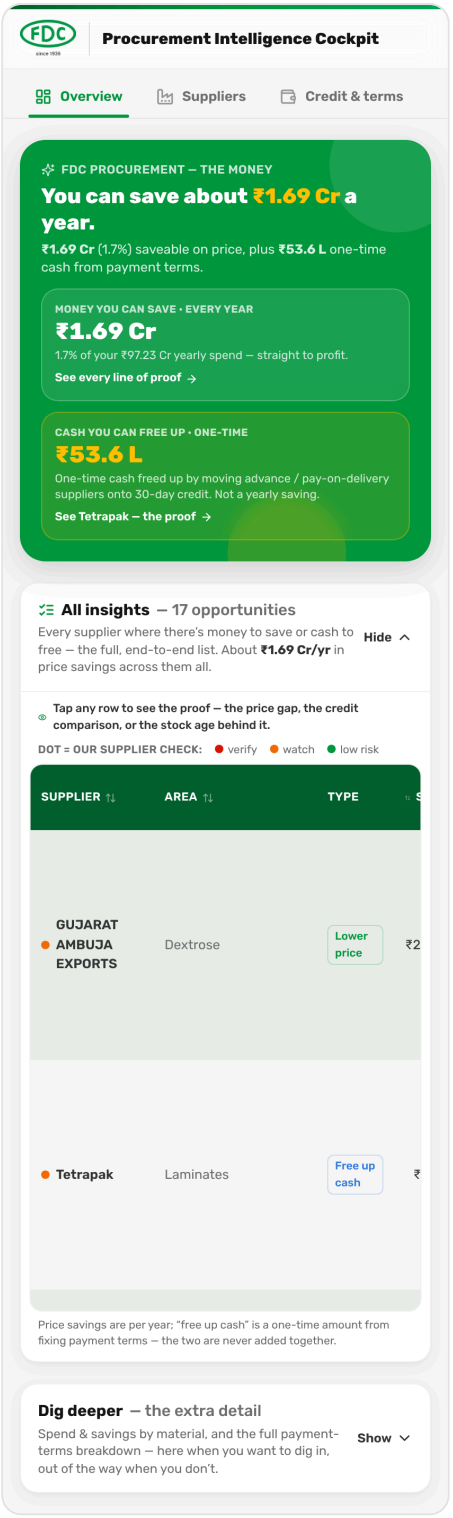

Overview — the money, with a risk check on every supplier. Every place to save money or free up cash in one end-to-end list. Each supplier now carries a red / amber / green dot from our due-diligence check — the legend sits just above the table.

Tap any row → the proof, then the supplier check. The price gap first, then the plain-language check: here GEEP's convicted-cartelist red flag with its source, and — because the action is 'move volume to the cheaper supplier' — the check on Shrinath Roto Pack, the supplier you'd move to.

Every supplier's detail opens with its check. In the Suppliers tab, each of the 27 vendors now leads with who they are, any red flag (with a source link), what we found, and the bottom line.

The whole cockpit works on a phone. Same insights, same risk dots, fully responsive.

FDC Supplier Due-Diligence — v2 (deep / investigative)

What this is: an equity-research-grade check on all **27 suppliers** — the ones that appear in a recommendation *and* your current suppliers — covering capacity, money, risk and quality in plain words, with a real source behind every fact. Serious findings were verified against primary sources (FDA, CCI, courts). Where an entity couldn't be verified we say so.

> **How to read the risk flags:** 🔴 = a serious, documented red flag worth a real decision · 🟠 = a notable concern to weigh · 🟢 = financially strong / low-risk. Everything here is a *lead to verify before acting*, not a final legal conclusion.

The headline — what the deep dive changed

Three suppliers carry serious, verified red flags (I checked each against the primary source myself):

1. 🔴 **Kilitch Healthcare (old-stock supplier) — US FDA caught them fabricating lab data.** FDA Warning Letter, 28 Mar 2024: it is their *"routine practice to fabricate results for samples that were never taken."* On FDA Import Alert 66-40 since Oct 2023; the maker behind the 2023 CVS/Walmart/Target eye-drop recall. For a pharma buyer, fabricated QC data undermines *all* their test paperwork. *(Verified at fda.gov. Caveats: recall had no confirmed injuries and is milder than the deadly EzriCare case; this is the **unlisted** Kilitch Healthcare, not the clean **listed** Kilitch Drugs — a plain Google search shows the wrong, clean company.)*
2. 🔴 **GEEP — your biggest laminate supplier (₹28 Cr/yr) — is a convicted cartelist.** CCI found GEEP guilty (2018) of price-fixing with Panasonic in dry-cell batteries (penalty ~₹9.6 cr); guilt was upheld on appeal — NCLAT reduced the penalty to **₹2.41 cr (2023), the final word (no Supreme Court appeal)**. "GEEP" is the old Geep batteries/torch brand — laminate is a sideline. *(Verified via CCI order coverage.)*
3. 🔴 **UFlex — chairman convicted in a corruption scandal.** Founder-chairman Ashok Chaturvedi was convicted by a CBI court (2010) in the Noida land-allotment scam and jailed (~4 yrs). *(Verified via Deccan Herald/Tribune. Caveat: the 2023 "₹1,500 cr tax raid" actually collapsed — the tax tribunal quashed the assessments in 2026.)*

The "ghost" alternatives — resolved using FDC's own SAP purchase registers (in the repo):

- **Cincorp** (SAP vendor 1000007) — real: 121 goods-receipts of HDPE bottles + PP caps to FDC-Baddi. (The *public registry* match is murky, so pin the exact legal entity from a GST invoice.)
- **Suraj Blow Plast** (vendor 1001339) — real: 38 receipts of amber PET pharma bottles to Aurangabad (~₹4.95/pc). Just has no web footprint.
- **Silk Polypack** (vendor 1000032) — **a single ₹7,775 / 31 kg laminate receipt (27 Mar 2026).** A one-off, not a supplier to move volume to — it should be dropped from "alternatives."

The pattern: the suppliers you *overpay* are mostly financially strong (Gujarat Ambuja, Sukhjit, Chemco, TPAC, Huhtamaki) → push price, don't switch. The *risk* sits in two places: (a) the three red-flag names above, and (b) the small "move-to" bottle makers (PIK, Premier, Mars, Suraj) which are real but tiny and unaudited — fine for leverage, not for volume without an on-site audit.

Your current (non-recommendation) suppliers checked out too — most are low-risk (Empire–Vitrum glass, Bprex and Triveni bottles), with one genuine standout: **Triveni Polymers is a wholly-owned arm of Germany's Gerresheimer**. Two are watch-items — **PGP Glass** (owner Blackstone is mid-IPO/sale) and **Scorpion Containers** (looks more like a logistics firm than a packaging maker) — and **Abhinav Speciality Foods** is a tiny, opaque LLP whose exact product should be pinned down.

Master risk table

Supplier	Material	Role	Risk	The one thing to know	Action
Gujarat Ambuja	Dextrose	overpay	🟠	Debt-free #1 maize processor, BUT a 2018 NGT pollution closure + violently cyclical profit	Push price; keep
Sukhjit	Dextrose	overpay + pay early	🟢	A-rated, clean, blue-chip clients; margin dip cut it A+→A	Cut price **and** stop early pay
Sayaji	Dextrose	move-to	🔴	Below-IG; **FY25 operating profit was negative**; selling land (₹73 cr) to survive	Small volume only; don't rely
Universal Starch	Dextrose	overpay	🟠	Went **"non-cooperating"** with its rating agency; bought its dextrose plant at a bank auction	Push price; don't grow reliance
GEEP	Laminates	overpay (₹28 Cr)	🔴	**Convicted cartelist** (CCI 2018); a battery firm, laminate is a sideline	Push price; don't grow reliance
Shrinath Roto Pack	Laminates	move-to	🟠	Pharma-grade & real, BUT cash flow cratered ~80%, free cash ₹1.95 cr, foil-plant debt	Second source + lever, dual-source
Tetra Pak India	Laminates	pay too soon	🟠	Rock-solid, BUT global antitrust record + repatriates ~₹300 cr/yr	Stop early pay; push 30-day terms
GLS Films	Laminates	overpay	🔴	**Came within one court order of insolvency** (2025–26); rating-shopping; interest-cover <1x	Push price hard; don't rely
Huhtamaki	Laminates	overpay	🟢	Very strong (AA–, low debt), BUT MD **and** CFO both quit within 3 months	Safe to move volume + push price
UFlex	Laminates	overpay	🔴	**Chairman convicted** (corruption); heavily indebted (net-debt/EBITDA 4.25x)	Price lever only; don't concentrate
Silk Polypack	Laminates	"move-to"	⚪	**A one-time ₹7,775 purchase** — not a real supplier	Drop from alternatives
Chemco	Bottles	old stock	🟢	Strong (A+), pharma clients (Cipla/J&J); "old stock" is their 125-day inventory model	Keep; add a freshness clause
Cincorp	Caps/bottles	overpay	🟠	Real per SAP (bottles+caps to Baddi); public-registry identity murky	Pin the GST entity; cost breakdown
PIK Plastics	Bottles	overpay + move-to	🟠	Real Surat proprietorship w/ Vapi factory, but unaudited	Lever now; audit before volume
Premier Plastic	Bottles	overpay + move-to	🟠	A micro-proprietorship (Jayesh Joshi); weakest pharma fit	Confirm entity; audit before volume
Mars Plastics	Bottles	overpay + move-to	🟠	Punjab partnership; best pharma product-fit of the small ones	Lever now; audit before volume

Supplier	Material	Role	Risk	The one thing to know	Action
Berry Global	Bottles	overpay + move-to	🟢	Rock-solid parent (Amcor), BUT India arm tiny & loss-making; makes devices not plain bottles	Safe — confirm they make your SKU
Suraj Blow Plast	Bottles	move-to	🟠	Real per SAP (amber PET to Aurangabad); no web footprint/audit	Lever; audit before bigger volume
TPAC	Bottles	overpay	🟢	A-rated, Thai-group, BUT leans ~85–90% on a single supplier	Push price w/ resin-cost clause
Kilitch Healthcare	Bottles/filled	old stock	🔴	**FDA data-fabrication + US import ban**; a pharma CMO, not a bottle maker	Treat as elevated-risk; see above
Empire–Vitrum Glass	Glass	current	🟢	Niche amber-glass unit of a cash-rich Mumbai group; property rentals are its engine	Keep; confirm glass type
PGP Glass	Glass	current	🟢	World-scale (ex-Piramal), BUT Blackstone is running an IPO + sale talks + a Mar-2026 refinancing	Keep; watch the ownership change
Bprex Pharma Packaging	Bottles/droppers	current	🟢	cGMP ophthalmic-dropper maker; now in the Amcor group (same site as Berry)	Keep; confirm invoicing entity
Triveni Polymers	Bottles/closures	current	🟢	A wholly-owned arm of **Gerresheimer** (German MNC); USFDA-DMF-certified	Keep; could safely grow
Rachana Plastics	Caps/measuring cups	current	🟠	One-man Mumbai proprietorship; clean record but no financial transparency	Pin GST entity; check FSSAI
Abhinav Speciality Foods	Food ingredient	current	🟠	Tiny, leveraged family LLP; the exact ingredient supplied isn't publicly clear	Get FSSAI + product spec/COA
Scorpion Containers	Bottles? / logistics	current	🟠	Evidence points to a **freight/3PL** firm, not a packaging maker	Confirm bottles vs transport

Dextrose

Gujarat Ambuja Exports 🟠 *(overpay ~₹21 Cr)*

- **Strong but cyclical:** India's #1 maize processor (5,000 TPD), net-debt-free, **CARE & CRISIL AA−/Stable** (no downgrades), ~₹950 cr cash. BUT profit is a commodity spread — **Q2 FY26 PAT −45% on +32% revenue**, then a sharp 2026 rebound; 5-yr profit growth is negative.
- **Deep finds:** a 2018 **NGT closure order** at its Sitarganj (Uttarakhand) plant for effluent discharge + a 2020 environmental-compensation order; promoter pay **₹40 cr+ (~11–15% of profit)** vs a **~3% dividend** on a ~₹950 cr cash pile; very low institutional ownership (~4.6%); **shelved its ethanol expansion** because profits disappointed; opened India's first maize-based fermentation (sodium gluconate) plant (Dec 2025).
- **Verdict:** financially low-risk to rely on; push price. The only genuine yellow flags are the Sitarganj pollution history and margin volatility. *Sources: CARE 4-Dec-2025; CRISIL 1-Aug-2025; NGT OA 123/2018.*

Sukhjit Starch & Chemicals 🟢 *(overpay + you pay too soon)*

- A-rated (**CRISIL A/Stable**, downgraded from A+ in Jun 2026 when margin fell below 7%), low debt (D/E ~0.15), 83-yr **Sardana-family** franchise, blue-chip low-concentration clients (Dabur, Nestlé, Mars, Marico). Runs bank limits ~93% full → your early payment is cash they value and you can reclaim. New ₹500 cr Nashik plant announced Sep 2026.
- **Verdict:** safe — pull **both** price and payment-timing levers. *Source: CRISIL 12-Jun-2026. (Note: Sukhjit is BSE 524542; earlier briefs had the code/family wrong — corrected.)*

Sayaji Industries 🔴 *(the suggested dextrose move-to)*

- **Genuinely distressed, not just "weak":** CARE **BB+** (slid from BBB+ over 3 yrs); **FY25 operating profit was NEGATIVE (−₹8.3 cr)**, interest cover "not meaningful"; PAT negative FY24 & FY25. Held together by **promoter cash injections** and **asset sales** — sold Kathwada idle land for **₹73 cr on 19 Oct 2026**. Its gum-arabic JV out-earns the entire parent. FY26 shows a thin, unproven turnaround.
- **Verdict:** viable as a *small* price-lever second source only; **do not move meaningful/sole volume** here until the turnaround proves out. *Source: CARE 25-Nov-2025 & 23-Jun-2026.*

Universal Starch-Chem Allied 🟠 *(overpay)*

- Small (~₹490 cr revenue, ~₹83 cr market cap), founder-family micro-cap. **Deliberately went "issuer not cooperating"** — stopped giving its rating agency information *and* fees — and was downgraded to **BB** for it. Entered the dextrose line in 2023 by buying a **bank-auctioned distressed plant for ₹17 cr**. RED-category effluent unit. Zero dividends despite profits.
- **Verdict:** push price, don't grow reliance; the self-chosen opacity is the flag. *Source: Infomerics 12-May-2025.*

Laminates / films

GEEP Industries 🔴 *(overpay — biggest laminate line, ₹28 Cr)*

- **Convicted cartelist:** CCI found GEEP guilty (order 30 Aug 2018, penalty ~₹9.6 cr) of a bilateral price-fixing cartel with Panasonic in dry-cell batteries; the guilt finding was upheld on appeal — **NCLAT reduced the penalty to ₹2.41 cr (2023), which stands as the final word (no Supreme Court appeal).** Panasonic escaped penalty via whistleblower leniency.
- **And it's not really a packaging house:** "GEEP" is the legacy **Geep batteries/torch/LED brand** (Thanawala family); GST shows battery, torch, LED **and** laminate-film lines. Unrated-then-non-cooperating credit history; margins compressed from ~8.6% to ~3%; the group's growth story is LED/EV/smart-meters, **not** laminate. FDC is a named client in CRISIL's rationale (relationship corroborated).
- **Verdict:** push price hard; **don't grow reliance** — laminate is non-core to them, and the cartel conviction + opacity are real reputational/continuity flags for a pharma buyer. *Sources: CCI Case 02/2017 (30-Aug-2018); CRISIL 28-Feb-2023.*

Shrinath Roto Pack 🟠 *(the suggested laminate move-to)*

- Real, decades-old pharma-grade converter (57,540 MTPA; clients **GSK, P&G, Britannia**; live US exports). BUT **BBB+ flatters it:** FY24 revenue dipped, **operating cash flow cratered ~80% (₹83 cr→₹17 cr)**, group free cash just **₹1.95 cr**, TD/GCA ~10x; the credit is hostage to an under-utilised (40–50%), over-budget **aluminium-foil plant** it guarantees; **CRISIL "non-cooperating" (Aug 2024)** right before it switched to CARE.
- **Verdict:** plausible second source + price lever — **dual-source, not sole-source**; verify spare capacity and that the foil-plant debt is under control before any big shift. *Source: CARE 9-Oct-2024.*

Tetra Pak India 🟠 *(you pay too soon)*

- Rock-solid MNC (Chakan = largest Tetra Pak plant outside Sweden); India entity ~₹4,500 cr revenue, profitable. **It finances its own customers** (credit/leasing) → no basis to make you pay early. Deeper: the group carries **two of the largest antitrust fines in EU and Chinese history** (for tying packaging to machines — its core model), and the India arm **repatriates ~₹300 cr/yr** to Sweden; straw-ban/recyclability-claim ESG exposure.
- **Verdict:** stop paying early; push 30-day terms. *Sources: company filings; FoodNavigator (SAIC fine 2013).*

GLS Films 🔴 *(overpay)*

- **Came within one court order of insolvency:** a creditor got GLS admitted to bankruptcy (NCLAT, Feb 2025, calling its defence a "moonshine defence"); the **Supreme Court reversed it (2026)**. **Rating-shopping in plain sight** — two agencies (Brickwork, CARE) went "non-cooperating" after **FY24 accounts disclosed debt-servicing delays**, then a third (Infomerics) graded it two notches higher. Combined group **didn't cover its interest in FY24** (interest-cover 0.86x, gearing 5.64x); flagship revenue −23%.
- **Verdict:** big capacity & good clients, but financially fragile and opaque — push price hard, **don't increase reliance**. *Sources: SC 2026 INSC 344; Infomerics 4-Jun-2025; CARE 3-Sep-2024.*

Huhtamaki India ● *(overpay)*

- Very strong (**CRISIL AA–**, near-zero debt, >₹400 cr cash, Finnish parent), pharma-grade, 90-yr history. Watch-items: **MD and CFO both resigned within 3 months** (late 2025, new MD Jan 2026); sold Thane land to Phoenix Mall for ₹429 cr; closing a small Baddi unit. Flat revenue = negotiating room.
- **Verdict:** safe to move volume + push price; monitor the leadership reset. *Source: CRISIL 12-Aug-2026.*

UFlex ● *(overpay)*

- India's largest flexible-packaging firm — capable and large, BUT: **founder-chairman Ashok Chaturvedi was convicted (2010 Noida land scam) and jailed**; heavily indebted (**net-debt/EBITDA 4.25x**, CRISIL outlook cut to **Negative**); thin ~2% margins; trades at ~0.4x book. The 2023 income-tax raids were real but the **assessments were quashed at tribunal (2026)** — more smoke than fire.
- **Verdict:** use as a price benchmark only; **don't concentrate volume**; the governance (chairman conviction) + leverage are the flags. *Sources: CRISIL 6-Aug-2026; Deccan Herald/Tribune (2010 conviction); ITAT (2026).*

Silk Polypack ● *(listed as a "move-to")*

- **Not a real supplier:** FDC's SAP shows **one** receipt ever — 31 kg of laminate for **₹7,775** (27 Mar 2026). No web/registry footprint because there's nothing there.
- **Verdict:** remove from "alternatives" entirely.

Rigid plastic (bottles / caps / jars)

Chemco Plastic Industries ● *(old stock)*

- Strong (**CRISIL A+**), revenue ₹939 cr FY25, pharma clients (**Cipla, J&J**), built a **>1-billion-bottle/yr food-grade rPET plant** (₹125 cr), absorbed 38-yr-old Gaurav Containers (FY24). "Old stock" = their deliberate ~125-day inventory model, not distress. A **₹1,500 cr IPO is talked about but has no DRHP on file yet.**
- **Verdict:** keep; add a "freshest-first / max-age-at-dispatch" clause for ORS shelf life. *Source: CRISIL 1-Sep-2025.*

TPAC Packaging India ● *(overpay)*

- A-rated (**ICRA A/Stable**), Thai-Plaspac-backed, ~₹822 cr revenue, pharma-capable. Watch-items: **PAT fell ~31%** even as revenue rose; **leans ~85–90% on a single supplier** (ICRA flags this). A brand-new separate "TPAC India Pvt Ltd" entity appeared in 2025 (restructuring — watch).
- **Verdict:** push price with a resin-cost clause; safe to keep/grow. *Source: ICRA 27-Mar-2026.*

Berry Global India ● *(overpay + a suggested move-to)*

- Parent is now **Amcor** (~$13bn, investment-grade BBB) after the Apr-2025 acquisition — rock-solid. BUT the **India legal entity is tiny and loss-making** (<₹1 cr revenue FY23, ~₹11.6 cr FY24), and its Bangalore site makes **drug-delivery devices (inhalers/droppers)**, maybe not your plain ORS bottles. Amcor is mid-restructuring (US plant closures so far).
- **Verdict:** safe to move to on parent strength — **first confirm the India plant makes your exact bottle SKU**. *Source: S&P (May 2025).*

Cincorp ● *(overpay)* · Suraj Blow Plast ● *(move-to)* — resolved via FDC SAP

- **Cincorp** is a **real** FDC supplier (SAP vendor 1000007): 121 receipts of HDPE bottles + PP caps to Baddi — it matches cincorp.co.in's product profile. The public-registry "Cincorp International Ltd" (Delhi, chemicals classification) is a murky match, so **pin the exact legal entity from a GST invoice** and get a cost breakdown (possible middleman markup).
- **Suraj Blow Plast** is also **real** (vendor 1001339): 38 receipts of amber PET pharma bottles to Aurangabad at ~₹4.95/pc — it simply has no web footprint.
- **Verdict (both):** genuine small suppliers — use overpay data as leverage; **audit before moving bigger volume**.

PIK Plastics / Premier Plastic / Mars Plastics ● *(overpay + move-to)* — identities cracked

- All three now pinned to exact GST numbers & proprietors (PIK = Paresh Khasakia, Surat, real Vapi factory; Premier = Jayesh Joshi, Vasai; Mars = Bansal partnership, Samana, best pharma product-fit). **None files public audited accounts** (two proprietorships, one partnership). Mars ≳ PIK ≫ Premier on pharma-bottle readiness.
- **Verdict (all three):** fine for price leverage now; **do not move volume without an on-site audit + ISO 15378/GMP, food-grade resin data, PCB consent, and audited financials.**

Kilitch Healthcare India 🔴 *(old stock)*

- **The red flag of the whole set.** FDA Warning Letter (28 Mar 2024) found **fabricated QC data** ("routine practice to fabricate results for samples that were never taken"), insanitary aseptic conditions, DEG/EG sampling failures; on **Import Alert 66-40** since Oct 2023; the maker behind the 2023 US store-brand eye-drop recall. A pharma **CMO** (likely supplies FDC filled/finished goods, not empty bottles). Formerly "NBZ Pharma." FY25 profit −44%, borrowings +5,534% (post-ban shock). **Distinct from the clean listed Kilitch Drugs.**
- **Verdict:** treat as **elevated-risk** — fabricated QC data undermines trust in all their release paperwork (directly relevant to the 211-day-old stock). Require their FDA remediation/CAPA evidence and re-qualify, or move the business. *Verified: fda.gov Warning Letter 320-24-29.*

Bprex Pharma Packaging India 🟢 *(current supplier)*

- cGMP pharma-packaging maker (ophthalmic dropper bottles — Rispharm/O-Design; inhalation/injectable platforms). Lineage **Truepack (1986) → Rexam → Berry → Amcor (2025)**; shares the Bangalore address & two-person board with Berry Global India. Parent (Amcor) is investment-grade; the India entity's standalone financials aren't public.
- **Verdict:** well-capitalised, low-risk MNC vendor and a strong fit for your eye-drops; confirm which entity (legacy Bprex vs new Berry Global India) actually invoices you. *Sources: Berry/Amcor filings; CPHI.*

Triveni Polymers 🟢 *(current supplier — the standout)*

- A "small" vendor that is actually a **wholly-owned arm of Gerresheimer AG** (German pharma-packaging MNC), branded "Gerresheimer Kundli." **USFDA-DMF-certified** (first Indian firm for plastic pharma containers), ISO/USP/EP compliant; clean-room plants at Kundli (Haryana) + Kosamba (Gujarat); capacity nearly doubled since 2012. Great Place To Work certified.
- **Verdict:** the strongest and lowest-risk of your small vendors — a tier-1 global player. Keep, and you could safely grow it. *Sources: Gerresheimer press; MCA.*

Rachana Plastics 🟠 *(current supplier)*

- Almost certainly a one-man Mumbai proprietorship (Jignesh Gandhi, GST 27AABPG3368G1ZV) making closures & dosing cups — flip-off seals, screw/child-resistant caps, 5/15/250 ml measuring cups (ORS-relevant). No public financials; clean record but zero financial transparency. (A Kolkata namesake Pvt Ltd exists but is probably not the supplier.)
- **Verdict:** a low-stakes closure/cup supplier — pin the exact GST entity and check food-grade (FSSAI) compliance. *Sources: GST registry; IndiaMART.*

Scorpion Containers 🟠 *(current supplier — verify what they supply)*

- Despite the "Containers" name, the evidence — courier GST codes, 10+ multi-state registrations, the **"Scorpion Express" pan-India 3PL logistics group** (Singh family) — points to **freight/transport, not manufacturing**. Only one thin packaging listing (PET bottles/HDPE jars) exists. Tiny (paid-up <₹1 cr); no rating, no public financials, no verifiable plant.
- **Verdict:** confirm what they actually supply you (bottles vs transport) before treating them as a packaging vendor. *Sources: MCA; GST (logistics SAC codes).*

Glass

Empire Industries — Vitrum Glass ● *(current supplier)*

- FDC's amber glass-bottle maker is a niche division ("Vitrum") of the diversified, listed **Empire Industries** (Malhotra family, 72.6%). **CRISIL A- / CARE A**, cash-rich, low-geared (0.49x); the group's real profit engine is **real-estate rentals** (~60% margin). Vikhroli plant makes molded amber pharma glass (likely Type III; Type I not confirmed); clients GSK, Pfizer, Merck, Cipla. A ₹33 cr doubtful-debt provision hit its (separate) trading arm.
- **Verdict:** long-established, low-continuity-risk amber-bottle maker, but a small, non-core unit of the group — confirm the glass type (Type I vs III) suits your product. *Sources: CRISIL Jul-2026; CARE Sep-2024.*

PGP Glass (ex-Piramal Glass) ● *(current supplier — ownership in flux)*

- A world-scale glass-packaging leader: **CARE A+**, ~₹4,216 cr revenue, ~33% EBITDA margin, the Type-I pharma-glass leader and global #1 in nail-polish bottles. BUT it is **100% Blackstone-owned** (since 2020) and now running a **parallel IPO (~4*bnaspiration*)*ANDtrade* – *saletalks*(*Brookfield* 1.3–1.5bn)**, with a **₹2,597 cr loan due Mar-2026** being refinanced. Pharma is only ~21% of its book (~77% luxury cosmetics/spirits). Strong ESG (EcoVadis Platinum, CDP 'A').
- **Verdict:** very capable; the real variable is the imminent ownership change — keep, but monitor the Blackstone IPO/sale, which could shift focus off low-margin domestic pharma. *Sources: CARE Dec-2025; PGP FY25 AR.*

Food ingredient

Abhinav Speciality Foods LLP ● *(current supplier)*

- A tiny, opaque Mumbai family LLP (Rathi family, LLPIN AAD-5116), adjacent to an Ayurvedic business (Abhinav Healthcare). Micro (~₹4 cr revenue, ₹53 L PAT FY25) and **leveraged** (debt ≈ total assets); office in Andheri with no visible factory; the exact ingredient supplied to FDC is **undiscoverable publicly** (likely nutraceutical/herbal or specialty food). No FSSAI action/litigation found (namesake insolvencies exist — don't conflate).
- **Verdict:** genuine but very small and opaque — the highest information-risk of the set. Obtain the FSSAI licence, exact product spec/COA and GST, and clarify the Abhinav Healthcare link. *Source: MCA registry.*

Every serious finding above (Kilitch FDA, GEEP cartel, UFlex chairman, GLS fire/near-insolvency) was checked against the primary source. Agent-gathered facts cite rating agencies, courts, and established press. The "ghost" resolutions use FDC's own SAP purchase registers. Items that couldn't be verified are flagged, not guessed.
